Dear Hiring Manager,

I am writing to express my interest in being a data analyst at Education Strategy Consulting. As a young person entering the world of computer science, I find it harder and harder to find jobs that I can truly feel like I am doing well. I wish to be a future educator myself, and I can think of no better place to practice my skills.

As a possible data analyst, I have personal experience building React websites so I have gained powerful experience in Python and SQL through Fast API and SQLite. Not only this, but I personally value the accessibility of data. I often use visualization tools to understand information in my own projects such as R and various python visualization libraries.

I pride myself in my ability to communicate. This is useful when it comes to describing issues I have run into, understanding critique and support, assessing the intentions behind a project's goal, and creating a friendly environment where people feel comfortable voicing their thoughts to me.

In short, I believe I can seamlessly fit into any team. I provide a friendly energy, an ability to communicate effectively, a passion for internalizing and replicating a project's design structure. A curiosity and zest for understanding information is what drove me to get my degree, and it will be clear as day to everyone I work with.

Thank you for your time and effort.

Sincerely,

Kaegan Koski
